PROFESSIONAL PROFILE

Versatile, highly adaptable senior manager with a solid multidiscipline engineering and managerial background, well experienced in international engineering projects, from inception to construction, commissioning, hand over and operation. With verifiable achievements in maintenance organisations, FMCG and Facilities Management in different industries: Marine, Retail, Construction, Process, Paper and Recycling, working both for final clients and delivery teams.

Core competencies include: Strategic Planning • Senior Management • Multisite Operations • Program and Project Management • Transition and Change Management • Process Improvement • Analytical • Team Building • Innovation • Engineering

WORK HISTORY

Current:

May 2020 to date: **Senior Construction Manager EU, Amazon**

Responsible for overseeing construction engineering, planning and design of Amazon Logistics Delivery Stations and other expansion projects. Responsible for Pan-European AMXL program on new fulfilment network buildings and additional capacity requirements within existing European facilities.

May 2020 to date: **Cluster Board Chair (NED), REAch2**

Working together with inspirational educationalists and talented business leaders to provide a better future for the next generation. Improving the life chances of young people, particularly the disadvantaged. Responsible for a Cluster that belongs to a growing charitable organisation, currently supporting 60 primary academies across England.

Past:

April 2018 - Feb 2020: **Head of Engineering Services, Port of Dover**

Senior Manager responsible for ensuring that the operational assets of the Port of Dover were maintained and developed to meet customer requirements in a safe and cost-effective way. I led the strategic development of the utility networks (power, water, sewage and gas) throughout the Port to meet current and future needs as the Port expands while ensuring full compliance with all relevant statutory requirements. I defined, reviewed and delivered a Long-Term Asset Plan through a combination of around 90 direct staff and contractors. My £13m budget planning and management responsibilities included all engineering projects across all disciplines, maintenance of our heavy plant (berths, brows, swing bridges, dock gates, fenders, harbour cranes, road mobile cranes, reach stackers, yard tractors and tugs, light vehicles, etc.). I found specially rewarding empowering my team members to deliver new initiatives and add value to the organisation.

Selected achievements:

- I depictured and defined the current estate and future needs of the Port's infrastructure and main assets, securing much needed 44% increase in maintenance and development for 2020 and a gradual increase in the following 5 years taking us to £25m in 2025.
- I succeeded in hiring 20% of the department workforce and retaining key personnel through a period of uncertainty.
- I successfully delivered Berths, PAX Access and other key assets maintenance overhauls.

- Radically changed the culture in the Maintenance Department, moving from a reactive to a preventative model.
- Put in place measures and processes radically improving Project Governance and Design Reassurance.
- Spearheaded a successful integration with Framework Contractors and Consultants.

July 2015- April 2018: **Country Engineering Manager, IKEA**

Responsible for the engineering, technical and architectural aspects of IKEA 30 stores across the UK and Ireland, new ones and refurbishments. Experienced engineering manager leading the planning, designing and construction of engineering projects. From the selection and procurement of all external consultants and contractors to supporting them to ensure satisfactory commissioning, testing, training and hand-over of the technical and building systems to the building facilities management staff. Extensive work with renewable energy, ranging from more than 7MW rooftop solar panels to cutting edge ground source heat pumps and biomass boilers. In charge of organising, supervising and coordinating technical work while obtaining cooperation from others.

Selected achievements:

- Timely, in budget and quality delivery of 3 brand new stores (Reading, Sheffield and Greenwich) and 4 Order and Collection Points (Norwich, Birmingham, Aberdeen and Westfield Stratford City).
- Multiple refurbishments of old stores (Nottingham, Milton Keynes and Leeds to name a few).
- Renewable energy projects delivery (1.7 MVA Photovoltaic System for Doncaster Distribution Centre, Ground Source Heat Pumps in Reading and District Heating in Sheffield).

July 2013-July2015: **Senior System Engineer, Kadant Johnson System International**

As a senior designer in the fluid handling division, process engineering, my daily tasks involved the design and manufacture of steam and condensate systems, advanced controls, and fluid handling systems, separator stations, steam jet thermocompressors, and direct injection heaters. From consultation phases through design, installation supervision and commissioning of projects ranging from £200K to £3M in countries like India, Turkey, UK, Italy, Spain, Czech Republic and Spain. These involved heavy machinery (drying and yankee cylindes, calenders, etc.), pressure vessels, valves, pipework, etc. My **Main Achievement** was successfully delivering demanding projects in remote locations with scarce resources getting things right the first time.

June 2012-July 2013: **Head of Projects, SAICA Paper UK Ltd**

I was responsible for a variety of projects including civil works and the final installation works of an Energy Recovery Boiler (22 MWth which generates 30 t/h steam), Waste Recycling Plant (segregation and valorization of metals, cardboard, plastics and organics). I established a local office to serve our mill, where a group of technicians and engineers (document controller, draughtsman, electrical, mechanical and civil engineer) reported to me and delivered all improvement works requested by the Production Team. Also, I worked extensively in the water treatment area, building and commissioning a £6M Anaerobic Reactor and ancillary equipment. My department dealt with 3 main tasks:

1) Technical documentation and drawing management and updating.
2) Daily improvements to increase efficiency and health and safety in our process.
3) Important projects and Capex investments.

Dec 2010-June 2012: **Mechanical Maintenance Engineer, SAICA Paper UK Ltd**

Feb 2008–June 2009: **Placement and Project, Heineken SA**

EDUCATION AND CERTIFICATIONS

MBA: The Open University UK • **MSc Civil Engineering:** University of Surrey, UK • **Various Management Courses**, ESIC Business School, Spain • **Postgraduate in Maintenance Engineering:** Ingeman, Spain • **MEng Industrial Engineering:** University of Seville, Spain
BRE BREEAM Associate • BIM Essential • IOSH Managing Safely • PRINCE2 Practitioner
