A Spanish Chartered Engineer and Canadian Professional Engineer with over 18 years' experience in **heavy civil works**, **road infrastructure** and **LRT projects**.

As the **Technical Director – Bid Director** in the pre-construction department of Dragados, I deployed and implemented construction methodologies for a variety of projects, such as but not limited to:

- **Highways**
- **Cable Stayed Bridges**
- **Segmental Bridges**
- **Precast Segmental Bridges**
- **LRT's**
- **Maritime works**
- **Tunnel Projects**
- **Underground Stations**

As a **Bridge Project Manager and Field Engineer,** I gained experience in managing projects from inception through implementation and controlled and monitored results as I focused on daily site coordination.

My international experience, both as a student and a professional, has shaped my strong set of soft skills. Fluent in **Spanish, Italian, and English**, I excel in cross-cultural communication. Always eager to embrace new challenges, I'm currently learning Japanese, demonstrating my commitment to continuous growth.

Professional Experience

Dragados Canada **July 2018 - Present**

I started my employment with Dragados as a Project Engineer, rapidly advancing to Assistant Project Manager within 3 months, then to Project Manager, and currently hold the position of Technical Lead, Bid Director. In all my roles I collaborated with cross-function teams to ensure effective coordination and communication in support of bids and successful early project development.

Project Manager - Technical Director, Bid Director **January 2020 - Present**

Roles and Responsibilities:

- Supported the pre-construction department and coordinated technical support for ongoing projects, deploying team members as needed. Led the development of construction means and methods, and construction schedules.
- Participated in bid process and project execution, providing leadership in resolving challenges and ensuring compliance with regulations.
- Led scope of work negotiations with subcontractors and coordinated with cross-functional teams and regulatory bodies.
- Implemented strong coordination processes and monitored bid progress and project controls.
- Identified and resolved challenges, leveraging analytical skills and industry knowledge to provide practical and cost-effective solutions.
- Coordinated with construction partners and engineering firms, leading the development of Construction Works Shops for market engagement.
- Supported the post-bid process by providing technical expertise and assisting in the transition from bid to project execution phase.

Led initiatives on key projects as Technical Director for the stayed cable bridge in the Pont d'Ille d'Orleans Project (with intense maritime works), including the temporary works at Finch-Kennedy Station, bridge work on the Bowmanville Expansion Project, peer reviews of tunneling methodology on Eglinton Crosstown West End Tunnel Contract, and construction on Ile aux Tourtes Bridge Project.

Project Engineer – Assistant Project Manager July 2018 – December 2019

As a member of the pre-construction team reporting to the bid director, I provided technical expertise and assisted in transition bids to execution phase. My technical expertise included construction methodology support for the following:

- Rapid bridge replacement for Finch West LRT (Toronto)
- Implemented accelerated works for a 2 km section for a total of 18km precast segmental elevated guideway in REM project (Montreal)
- Developed alternatives between traditional cantilever retaining walls and reinforced earth solutions (MSE-Walls)
- Developed a temporary railway support system that allows rail operations while three pedestrian tunnels for Eglinton Crosstown LRT project are being installed below.
- Reviewed formwork alternatives to increase productivity during construction of the pylons for the Gordie Howe cable stayed bridge.

Carmacks Enterprises (Eurovia- Vinci Group) **August 2015 – July 2018**
Western Canada Bridge Technical Lead
Bridge Project Coordinator – Project Manager

Managed the construction of small bridge projects located in remote areas of the provinces of Alberta and Saskatchewan.

- Developed baseline budgets and construction schedules, coordinating all construction works with the support of a general site superintendent.
- Coordinated construction procurement plan and permits application process, preparing and coordinating the key permits applications with Client and key stakeholders.
- Provided technical support for the Regina Bypass project ($2.4 billion), contributing to the development of construction methods and maximizing construction productivity.
- Led the construction planning and development of Construction Works shops for market engagement.

Acciona Canada **August 2011 – December 2014**
Structures Field Engineer

Contributed to the successful completion of Southeast Stoney Trail project ($789 million), a Design- Build-Finance-Maintenance-Operations project that included more than 31km of Highway and 27 bridge structures. I initially supported the earthworks and bridge department and ultimately managing the overall structures for the Segments 1E, 2, and 3, and the superstructures for Segment 1C.

- Coordinated design development and construction for 12 bridges and 15 retaining walls.
- Managed construction progress and quality control, supervising construction labor and developing a cost control tracking and reporting system.
- Developed structural lifting for all the girders and provided engineering support during construction, providing site queries instructions to prevent construction conflicts.

Juan Antonio Ramiro Nuño
juaranu@gmail.com ● +1-403-891-9662 ● https://www.linkedin.com/in/juanantonioramironuno/

- Coordinated implementation of Traffic Management Plans for construction activities.
- Proposed, developed and implemented construction alternatives to improve productivity for overall project benefit.

Ingeniería y Control Técnico **January 2010- July 2011**
Project Coordinator

Project Coordinator, I worked in a Construction Management at Risk Project representing the Engineering team for the Owner, Aguas de Valencia (main supplier of potable water for more than 3million people within Valencia Metropolitan Area). My responsibilities were:

- to develop feasibility designs for coordinating with key stakeholders in more than 100 High pressure watermain chambers enhancements work and coordinate all the permits and approvals for the construction.
- to complete pre- design for all project locations (in total 103) and to carry out a full estimate and works schedule for owner approval.
- to prepare tender packages for each project location and assist on the selection fo subcontractor
- To carry out Owner's engineer role for the construction of all sites, where I supervised construction works and QA/QC inspections, representing the client in meetings with main contractors., I prepared reports and documentation for project manager, coordinating monthly progress reports and mark-ups for as-builts process. In addition, I developed detail traffic control strategies, prepared utility relocation plans and designed structural chambers for the high-pressure watermain mechanical components.

Rover Alcisa (currently known as Rover Group) **June 2009- December 2009**
Field Engineer

Employed during my thesis development to carry out closing process for several packages on the tunneling portion of the Benimamet Metro Valencia" Project in Valencia (Spain) with an original contract value of €28 million.

ingeniería y Control Técnico **October 2006– October 2008**
Design Project Coordinator
24 month internship which led to full time employment post graduation.

I developed permanent and temporary structural design for storm management systems, coordinated construction schedules, supporting the main contractor coordination efforts with key stakeholders, and implemented quality assurance processes for structural and civil construction activities.

Education

M. Eng in Civil Engineering at Universitat Politècnica de València (UPV), **Sept 2000 – Dec 2008**
While studying I participated in more than 24 months of co-op programing and completed an International Student Exchange Program at the Italian Politecnico di Torino.

MSc. in Civil Engineering at Universitat Politècnica de Valencia (UPV) **Jan 2009 – June 2011**
To complete my degree I prepared a thesis developing a parkade solution from feasibility to conception including options analysis with full design and cost analysis for value engineering.
