Cover Letter:

I am a professional with over 15 years of experience in civil construction, equipment and industrial plant management, and electromechanical assembly. I have a proven track record of delivering high-quality solutions to meet the needs and expectations of clients and shareholders, diligently managing technological control, schedule, and cost. I hold a bachelor's degree in mechanical engineering (UNESP), a postgraduate degree in CFD (ITA), and an MBA in business management (PDE - with GPA from Brooklyn College).

As Director of Construction at Scala Data Centers, I led the execution of data center projects in Brazil. During my four years as an entrepreneur at ONE2PH, I led the technical and executive processes for technical qualification, legal and tax institution of the company, project budgeting, customer acquisition, and project management.

In my longest professional experience, during my more than 11 years at Odebrecht, I worked in five countries, successfully completing all the challenges I was entrusted with. I fulfilled critical missions in various environments and cultures.

I am registered with professional boards in Brazil (CREA) and Peru (CIP), hold permanent residency documentation in the USA (Green Card), and am proficient in three languages: Portuguese (native), Spanish (fluent), and English (advanced).

I have a passion for innovation, sustainability, and collaboration, and I seek to make a positive impact on the communities where we operate. In my experience, I highlight the successful implementation of a new mining company in Bolivia for GEL (Grupo Empresarial Lafuente), equipment rental market for Odebrecht Bolivia, and contributions to various large-scale infrastructure projects such as pipelines, ports, highways, and industrial complexes. I have demonstrated skills in management, negotiation, engineering, and leadership, and I am always eager to learn new technologies and best practices.
