With a diverse background encompassing pre and post-contract construction activities and extensive business management skills, I bring a wealth of experience to the table. My proven track record in promoting, developing, and delivering complex projects globally speaks to my ability to navigate diverse challenges with precision.

Driven by a commitment to sustainability, I analyse, assess, and act to drive both business efficiency and project delivery, ensuring a balanced approach. By implementing refined business management strategies and refocusing operational delivery, I've successfully enhanced business profitability, reduced staff attrition, stimulated morale, and fostered engineering excellence. Additionally, my efforts have led to the development of new contract opportunities, showcasing a proactive approach to business development.

In the construction sphere, I've led numerous program management initiatives, overseeing the rollout of residential and retail projects across Britain. This involved skilfully coordinating teams of Project Managers, Cost Managers, and Construction Managers to ensure seamless project execution. Drawing on my background in quantity surveying, cost, and commercial management, I bring a commercially astute perspective to project and program management, consistently delivering projects within time and budget constraints.

Dynamic and strategic in my approach, I am adept at driving positive change while maintaining a steadfast focus on sustainability, excellence, and results. My commitment to delivering exceptional outcomes underscores my dedication to both professional success and environmental responsibility.

KEY SKILLS

- Organisation & delegation
- Communication, motivation & mentoring
- Commercial awareness / contract administration
- Strategic thinking, forward planning & delivery
- Interpersonal skills.
- Problem solving & decision-making.

experience

SEISMIC GROUP Limited

December 2021 – Present: Programme Director
Experienced Programme Director with a proven track record overseeing Programme, Project, Construction, Design & Commercial Management within the construction/civils industry. Recognized for expertise in Modern Methods of Construction (MMC) and adept at managing pre and post-construction activities to ensure seamless project delivery. Skilled in coordinating commercial and operational aspects, driving business growth, and implementing strategic improvements to enhance overall performance.

Key Skills;

- Programme / Project Management
- Construction Management
- Commercial Management
- Modern Methods of Construction (MMC)
- Business Development
- Financial Analysis
- Health, Safety, Environmental & Quality (HSEQ) Compliance
- Stakeholder Management

Professional Experience:

- Oversee all projects undertaken by Seismic Group Ltd, ensuring efficient coordination of pre and post-construction activities both commercially and operationally.
- Spearhead the adoption of Modern Methods of Construction (MMC) within the company, positioning Seismic Group Ltd as a leading exponent of MMC in the UK construction sector.
- Managing a new mixed tenure social housing apartments project, mitigating the impact of construction activities on existing residents through the implementation of MMC solutions.
- Lead on pre-construction for the Zinc project, a mixed use development for micro-businesses across multiple locations using Seismic's MMC DfMA platform design.
- Conducted a comprehensive review of Seismic Group Ltd's business practices, including financial, commercial, HSEQ, and project delivery processes, identifying areas for improvement.
- Implemented a structured commercial review process and set revenue targets to drive business growth, supported by a focused business development strategy aligned with the company's business

At Seismic Group I have taken the lead to actively prioritise sustainability, with a focus on reducing carbon emissions, this approach replicated in all projects where Passivhaus, Quiet Mark, whole life carbon etc is assessed. Embracing a carbon-neutral approach, is a must to mitigate our carbon footprint, which can only contribute to a healthier planet, now & in the future.

SERIMAX FJC Limited

June 2014 – August 2021: VP Serimax FJC
Serimax FJC provides specialist services & equipment to the oil & gas infrastructure sector.

Upon joining the business, it was evident rationalisation was required to improve efficiency & increase profitability by cutting out waste / reducing costs, re-energising the workforce & improving the client offer.
To achieve this goal, I oversaw a review of inventory & stock levels & achieved a reduction of over 30%, through a change in operational & financial principles/processes which provided ongoing benefits.
Equipment design was overhauled to reflect market & client needs after I initiated a review of the design & effectiveness, this resulted in a 50% cost reduction & greater reliability through a more focussed engineering approach.
It was clear many personnel had undefined roles & responsibilities and I made it a priority to clarify these & communicate them effectively to ensure a clear understanding. This was imperative to increase productivity, reduce duplication, improve competencies & importantly destress a previously tense workforce.
The business development function needed support & new impetus, often proposals were issued late & rushed. In consequence I commissioned a new & more dynamic (Excel based) costing tool, reducing proposal preparation time by 50%, improving accuracy & resulting in an expedited issue to the client.
Through these improvements, I delivered a decrease of costs by over 15% as well as increased revenues (prior to the Covid-19 pandemic) up 4-fold on the previous year.
During the Covid-19 pandemic business continuity was paramount & I developed a plan to mitigate the effects on the business through identification of further cost reductions, furlough initiatives, contract renegotiations etc.
As VP of Serimax FJC I had overall responsibility for the following:

- Financial control / reporting / final decision
- Project & operational delivery for all contracts
- Group compliance
- Development of business strategy & implementation
- Tactical leadership of senior management team
- Directing the R&D function to complement the business focus
- Commercial / contract coordination
- Business development, client presentations, contract negotiations
- HSEQ leadership
- Team Development – appointments, support & mentoring

PIH Limited

November 2008 – May 2014: General Manager
PIH Limited provides specialist services & equipment to the oil & gas infrastructure sector.
I headed up operations & had responsibility for all global projects, many requiring immediate support to prevent loss of productivity whilst ensuring the project P&L was not compromised, the majority of projects exceeded a project margin of 30%.

I managed the commercial department which I radically restructured to introduce monthly cost reporting & cost management. This led to improved project margins, generally up by 5% through working with the Operations team to identify all cost variations & the Finance team to establish real project costs.

I supported business development providing many services capability presentations, giving operation systems guidance & commercial & contractual advice, including attending pre-award & contract negotiation meetings.

CHARLES TOPHAM GROUP

September 2007 – August 2008: Senior Projects Manager - Development
A development company specialising in both commercial & residential developments.

- Project management, taking projects forward from inception to planning, through design development, procurement, & handover to the construction team for on-site delivery.
- Feasibility appraisals of potential development sites, together with ongoing cost reviews to monitor (& if necessary) amend site delivery strategy to achieve budget targets.
- Consultant appointments, fee negotiations & design co-ordination to ensure scheme potential is maximised & delivered to the required budget.
- Review & input into sale leases & agreements for lease with potential tenants.

DANDARA LIMITED

August 2004 – August 2007: Senior Development Manager (August 2004 – August 2007)

The Dandara Group is one of the most progressive property companies in the UK.

- Feasibility appraisals of potential development sites.
- Reworking of schemes to achieve maximum potential & returns from the site.

- Consultant appointments & design co-ordination to ensure scheme potential is maximised & delivered to the applied budget.
- Appointment of management companies to operate the schemes.
- Co-ordination with the Sales Team to set budgets, monitor results & adapt our product to reflect the market demand.
