Sukumara Rao

Electronics Engineer | Automation |
Almere, Flevoland, Netherlands

Summary

RF and Electromagnetics Engineer with 5+ years of experience in antenna design, radar integration, and measurement validation. Recently relocated to Almere, Netherlands on a spouse visa with full work authorization—available immediately.

I specialize in simulation (CST Studio Suite, Ansys HFSS, COMSOL), RF measurements (VNA, spectrum analyzer, anechoic chamber), and test automation using MATLAB and Python. At Continental Autonomous Mobility, I developed simulation workflows for 77 GHz radar systems, automated measurement analysis, and applied AI-driven optimization - collaborating daily with colleagues across APAC, Europe, NA.

With a Master's in Digital Electronics and Advanced Communication Engineering, I bring strong foundations in digital systems and logic design. I've recently expanded into PLC programming and industrial automation (Siemens TIA Portal), broadening my capabilities in controls and test engineering.

I'm eager to contribute to the Netherlands' thriving semiconductor, automotive, and high-tech industries in roles spanning RF engineering, electronics testing & measurements, automation controls, or validation engineering.

Let's connect if you're looking for someone who bridges simulation, measurement, and practical problem-solving.

Experience

Continental

4 years

Technical Specialist
January 2024 - August 2025 (1 year 8 months)

Bengaluru, Karnataka, India

In my current role, I have transformed radar systems development by optimizing sensor integration for 77GHz automotive radar. Leading simulations with CST MWS and Ansys HFSS, I have improved testing efficiency by refining toolchains and processes. Collaborating across borders, I ensure radar solutions meet rigorous automotive standards. I also design MATLAB-based scripts to analyze beamforming, DOA, and attenuation, providing actionable insights to customers and stakeholders.

RF Engineer
September 2021 - January 2024 (2 years 5 months)
Bengaluru, Karnataka, India

Kavveri Telecoms Products Limited
RF Antenna Design Engineer
July 2020 - August 2021 (1 year 2 months)
Bengaluru, Karnataka, India

Here, I specialized in antenna design and measurements for LTE, Wi-Fi, and marine systems. My contributions improved system performance by leveraging CST Microwave Studio for simulation and testing. I also designed multi-frequency power dividers for 2G–5G applications, enabling seamless telecommunications integration. By collaborating closely with mechanical engineers, I ensured precision in fabrication processes and enhanced overall system efficiency.

SABIC
RF/MULTIPHYSICS Project Intern
May 2019 - May 2020 (1 year 1 month)
Bengaluru, Karnataka, India

During my tenure at SABIC, I developed CAE-based simulation models for evaluating composite materials in radar and LiDAR systems. I conducted teardown analyses and designed 77GHz antennas and radomes and evaluated composite materials with Altair Feko and COMSOL Multiphysics. My work improved radar performance and validated LiDAR prototypes using innovative simulation techniques.

Education

Manipal Academy of Higher Education

Master's degree, Digital electronics and advanced communication · (2018 - 2020)

Visvesvaraya Technological University

Bachelor's degree, Electronics and communication engineering · (2014 - 2018)
